

having an axis defined at a shaft center and coaxially aligning with an axle axis of the car wheel;

a pendulum weight formed on a lower portion of said rotating disk; and

a decorative feature including emblem, logo, trademark, figure and design formed on a front surface of said rotating disk;

said housing formed as a cylindrical shape having a cylindrical wall formed on a housing bottom, a bushing formed in a central portion of the housing for engaging a bearing in said bushing for rotatably mounting the shaft therein, and a front rim which is combined with a transparent cover to encase the rotating disk and the decorative feature within an interior confined by the housing and the cover;

whereby upon rotation of said housing along with the rotation of ~~a~~ the car wheel when driving a car, said rotating disk is gravitationally pendent to constantly orient said decorative feature in an upright position for a clear display thereof without being simultaneously rotated with the car wheel and the housing.
